Technical Details

#1

The new security update addresses 22 new vulnerabilities from which 15 were critical security flaws (as per Adobe).

#2

Some of these vulnerabilities could allow remote attackers to compromise the vulnerable systems and execute arbitrary code. Most of these vulnerabilities exist due to use-after-free code errors when processing PDF files, which allows an attacker to trick the victims into opening specially crafted PDF files. Users and organizations are encouraged to update their systems as soon as possible.
