Summary

In recent campaigns, the Evilnum actor group has targeted the Decentralized Finance (DeFi) sector using Evilnum Malware. The latest iteration of Evilnum backdoor employs a diverse set of ISO, Microsoft Word, and Shortcut (LNK) files. Furthermore, the malware is used for reconnaissance, data theft, and the deployment of further payloads.

Technical Details

#1

Evilnum, an actor group, targets victims with spearphishing emails that include a link to a ZIP file in an attempt to deliver numerous OneDrive URLs with either an ISO or .LNK attachment. The actor employed monetary inducements to persuade the recipient to launch the EvilNum payload.

#2

The initial payload is used to decrypt and restart the infection chain. After the antivirus software residing on the targeted endpoint is compromised, it dynamically loads the C# code and sends the screenshot to the Command and Control (C2) server.
