

THREAT ADVISORY

**ACTOR
REPORT**

**Iranian APT's new data extraction tool
Hyperscrape**

Date of Publication

August 25, 2022

Admiralty code

A1

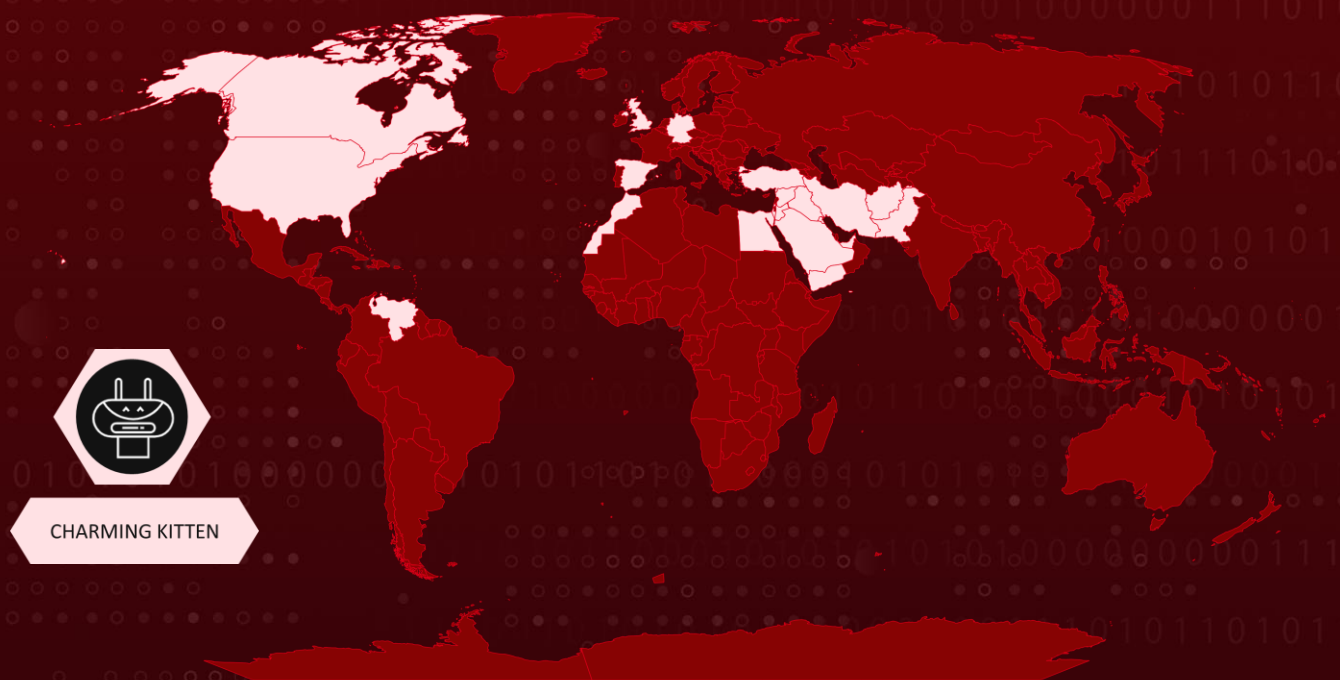

TA Number

TA2022182

Summary

Charming Kitten, an Iranian government-backed threat group, has been employing a new data extraction tool, HYPERSCAPE. It has been used to retrieve data from Microsoft Outlook, Yahoo, and Gmail accounts. The tool is still being actively developed, and the most recent sample is from 2020.

T1114 Email Collection	TA0010 Exfiltration	T1020 Automated Exfiltration	

Technical Details

#1

Hyperscrape is a .NET tool built for Windows platforms. It runs on the attacker's PC and allows the attacker to extract emails from mailboxes once they have valid email credentials or a valid session cookie.

#2

Once logged in, the utility downloads and exfiltrate the contents of a victim's email inbox, as well as delete security emails sent by mail service providers to notify the victim of any anomalous logins.

#3

If the email was previously labeled as unread, HYPERSCRAPE automatically marks it as such after opening and downloading it as a ".eml" file. Earlier versions of HYPERSCRAPE included a function that allowed you to request data from Google Takeout and export it as a downloadable archive file.
