

THREAT ADVISORY

**ATTACK
REPORT**

Multiple industries targeted by uptick of BianLian ransomware

Date of Publication

August 23, 2022

Admiralty Code

A1

TA Number

TA2022178

Summary

Attackers are gravitating to deliver BianLian, a new ransomware strain written in Go that was spotted mid-way through July 2022. Numerous well-known enterprises have been targeted, including those in manufacturing, education, healthcare, banking, and finance.

Potential MITRE ATT&CK TTPs

TA0002 Execution	T1204 User Execution	T1059 Command and Scripting Interpreter	TA0005 Defense Evasion
T1497 Virtualization/Sandbox Evasion	T1027 Obfuscated Files or Information	T1027.002 Software Packing	T1036 Masquerading
TA0007 Discovery	T1082 System Information Discovery	T1083 File and Directory Discovery	T1518 Software Discovery
T1518.001 Security Software Discovery	T1120 Peripheral Device Discovery	TA0040 Impact	T1486 Data Encrypted for Impact
TA0008 Lateral Movement	T1091 Replication Through Removable Media		

Technical Details

#1

When the ransomware is executed, it uses the `GetProcAddress()` API to check the `wine_get_version()` method to determine whether the file is running in a WINE environment.

#2

The ransomware then launches many threads using the `CreateThread()` API function to accomplish faster file encryption. First, it reads 10 bytes from the original file, then encrypts the data and copies it to the target file. To avoid detection by anti-virus software, data is divided into small blocks.

#3

The malware then uses the `GetDriveTypeW()` API to identify the system drives and encrypts any files on the associated drive and renames the encrypted files with the “.bianlian” extension before slipping a ransomware note under the file name "Look at this instruction.txt."
