Technical Details

#1

The intrusions took place in the form of several phishing campaign waves that used URL spoofing as Australian media firms that are actor-controlled domains and is used to distribute the ScanBox reconnaissance framework.

#2

The initial script collects several types of information from the victim's machine in prepping for a probable subsequent compromise and exfiltrates data back to the C2. It also serves as a foundation for the succeeding stages of data collection, which includes the following modules as a part of the ScanBox framework:

- Keylogger: records keystrokes performed within a ScanBox iframe.
- Browser plugins: identifies installed browser plugins
- Browser fingerprinting: identifies and analyzes the victim's browser technical capabilities
- Peer connection: implements WebRTC to real-time communication over APIs
- Security check: checks if security tools are installed on the victim's machine
