

THREAT ADVISORY

**VULNERABILITY
REPORT**

**Zero-Day vulnerability in WPGateway Plugin
compromises WordPress sites**

Date of Publication

September 22, 2022

Admiralty Code

A1

TA Number

TA2022209

Summary

The recently uncovered CVE-2022-3180 zero-day vulnerability allows an unauthenticated attacker to add an administrator account to WPGateway-powered websites. WPGateway is a commercial plugin that allows users to install, backup, and clone WordPress. The flaw is being actively abused, and no patch has been issued yet.

CVE Table

CVE	NAME	PATCH
CVE-2022-3180	Unauthenticated Privilege Escalation in WPGateway Plugin	

Potential MITRE ATT&CK TTPs

TA0043 Reconnaissance	T1594 Search Victim-Owned Websites	TA0042 Resource Development	T1584 Compromise Infrastructure
T1586 Compromise Accounts	TA0004 Privilege Escalation	T1548 Abuse Elevation Control Mechanism	TA0008 Lateral Movement
T1210 Exploitation of Remote Services	TA0040 Impact	T1565 Data Manipulation	

Technical Details

The zero-day flaw exists as a result of missing authorization validation. A remote, unauthenticated attacker can add an administrative user account to any WordPress installation by sending a specially crafted request to the affected plugin. An attacker who successfully exploits the vulnerability may be able to execute arbitrary PHP code on the server. An administrator account with the username 'rangex' showing up in the dashboard indicates that WordPress has been compromised.

Vulnerability Details

CVE ID	AFFECTED PRODUCTS	AFFECTED CPE	CWE ID
CVE-2022-3180	WPGateway versions prior to and inclusive of 3.5	cpe:2.3:a:wpgatew ay:wpgateway:*:* *:*:wordpress:* *	CWE-285
