Zero-day vulnerability uncovered in Trend Micro Apex One

Date of Publication

September 16, 2022

Admiralty Code

A1

TA Number

TA2022206

Summary

A zero-day vulnerability, along with several other issues, has been addressed by Trend Micro. It has been identified as CVE-2022- 40139 and could allow attackers to execute remote code.

⚙️ CVEs Table

CVE	NAME	PATCH
CVE-2022-40139	Improper Validation of Rollback Mechanism Components	✓
CVE-2022-40140	Origin Validation Error Denial-of-Service Vulnerability	✓
CVE-2022-40141	Information Disclosure Vulnerability	✓
CVE-2022-40142	Agent Link Following Local Privilege Escalation Vulnerability	✓
CVE-2022-40143	Link Following Local Privilege Escalation Vulnerability	✓
CVE-2022-40144	Login Authentication Bypass Vulnerability	✓

⚙️ Potential MITRE ATT&CK TTPs

TA0004 Privilege Escalation	T1068 Exploitation for Privilege Escalation	TA0001 Initial Access	T1190 Exploit Public-Facing Application
TA0002 Execution	T1203 Exploitation for Client Execution	TA0040 Impact	T1499 Endpoint Denial of Service

Technical Details

#1

The zero-day vulnerability (CVE-2022-40139) is due to improper validation in Apex One's "rollback" function. The rollback function is used to revert Apex One agents to previous versions. The vulnerability exists because of Apex One agents that can download unverified components, which can lead to code execution. Despite the fact that an attacker would only be able to exploit this vulnerability if they had access to the Apex One administrative console, active attacks have been reported.

#2

Other flaws can be exploited by local attackers to cause a denial-of-service, escalate privileges, or bypass authentication

Vulnerability Details

CVE ID	AFFECTED PRODUCTS	AFFECTED CPE	CWE ID
CVE-2022-40139	Apex One 2019 (On-prem) SaaS	cpe:2.3:a:trend_micro:a pex_one:*.~.*.~.*.~.*.~.*	CWE-345
CVE-2022-40140			CWE-345
CVE-2022-40141			CWE-310
CVE-2022-40142			CWE-59
CVE-2022-40143			CWE-59
CVE-2022-40144			CWE-287
