POLONIUM employs backdoors to target Israel

Date of Publication

October 11, 2022

Admiralty code

A1

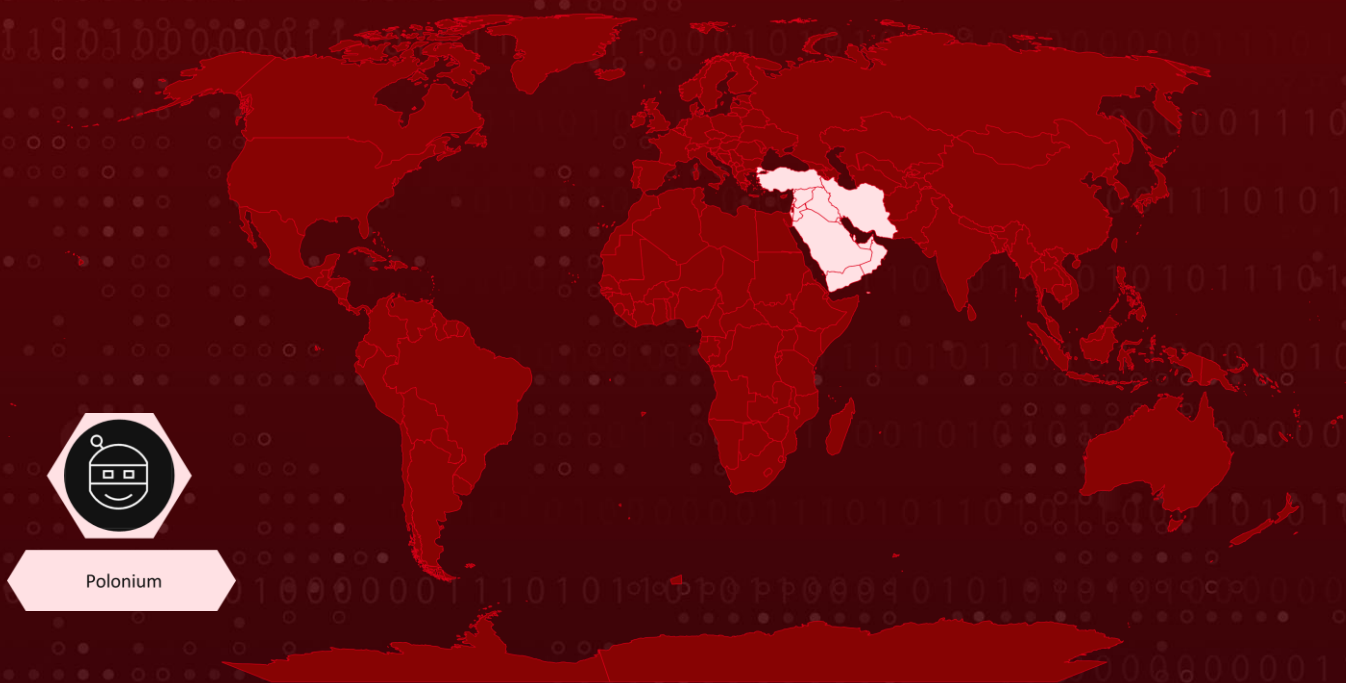

TA Number

TA2022219

Summary

POLONIUM is a cyber espionage gang that leverages OneDrive and Dropbox cloud services for command and control (C&C) by employing a custom toolkit that includes seven backdoors and various spying modules to target a dozen Israeli entities.

Technical Details

#1

POLONIUM employed at least seven modified backdoor variations, including four novel unreported backdoors dubbed 'TechnoCreep,' 'FlipCreep,' 'MegaCreep,' and 'PapaCreep'. Several of these backdoors features malicious modules for keylogging, command execution, and file exfiltration.

#2

Certain backdoors leverage the benefits of legitimate cloud services like OneDrive, Dropbox, and Mega to act as command and control (C2) servers. While others employ regular TCP connections to external C2 servers or obtain instructions to execute from FTP server files.

#3

CreepyDrive and CreepySnail are PowerShell backdoors. The former reads and executes commands from a text file stored on OneDrive or Dropbox. While the latter backdoor sends HTTP requests to a C&C server and receives and executes PowerShell commands.
