CVEs

CVE	NAME	PATCH
CVE-2022-40303	Integer overflow in Apple macOS	
CVE-2022-40304	Resource management error in Apple macOS	

Vulnerability Details

MacOS Ventura contains two security flaws that can be exploited to cause an integer overflow and execute arbitrary code. The CVE-2022-40303 vulnerability exists as a result of an integer overflow in parse.c while processing exploitation trigger material and executing arbitrary code on the susceptible system. A denial of service (DoS) attack will follow the exploit of CVE-2022-40304, a vulnerability in entities.c mirrored in the way libxml2 controls reference cycles.
