

THREAT ADVISORY

ATTACK REPORT

New Venus Ransomware Targets Healthcare industry

Date of Publication

November 17, 2022

Admiralty Code

A1

TA Number

TA2022262

Summary

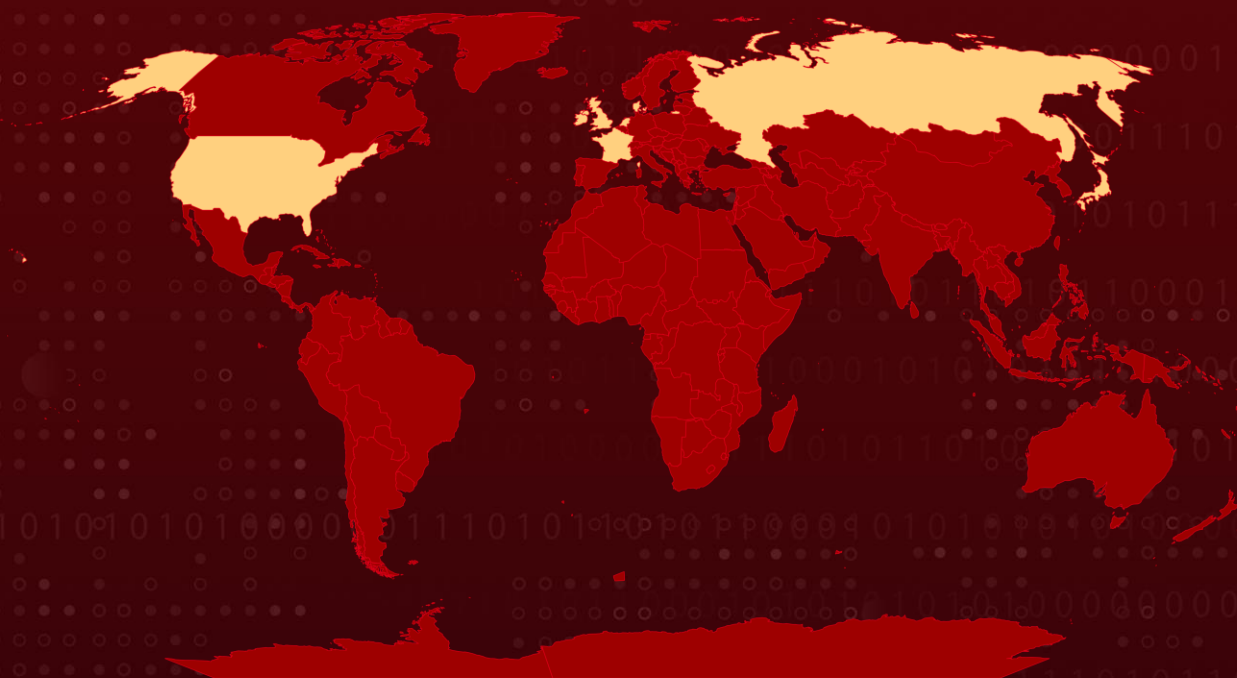

First Activity Observed: August 2022

Attack Region: USA, UK, Denmark, France, Ireland, the Netherlands, Russia, and Japan

Target Industries: Healthcare

Attack: Venus Ransomware targets publicly exposed Remote Desktop services.

Attack Details

#1

Venus ransomware, also called Goodgame, has been a source of concern since August 2022. Venus ransomware is an example of the legacy ransomware model: a standalone package sold on underground markets rather than a subscription or ransomware-as-a-service. In addition to the compiled binary, the package comes with access to decryptors.

#2

Before executing, Venus ransomware samples will spawn a UAC (User Access Control) prompt. As a result, the ransomware uses the ping to create a delay before deleting its binary and hiding the console.

#3

A hardcoded list of processes is compared against what is running on the target, and any applicable processes are shut down using taskkill.exe. The persistence of ransomware is achieved by adding a registry entry for the payload. The .venus extension will be appended to affected files once they have been encrypted.

Recommendations

Security Leaders

Phishing simulations and routine education and awareness training and communications rarely account for MFA fatigue and web browser hygiene. Integrate and communicate all lessons learned.

Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize and block all indicators attributed to the threat actors and attacks through your Command Center. Test your controls with Uni5's Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the 'Potential MITRE ATT&CK TTPs' & 'Indicators of Compromise (IoC)' on the following pages.
