THREAT ADVISORY

ATTACK REPORT

A New GoLang Botnet named GoTrim BruteForcing multiple CMS

Date of Publication

December 15, 2022

Admiralty Code

A1

TA Number

TA2022299

Summary

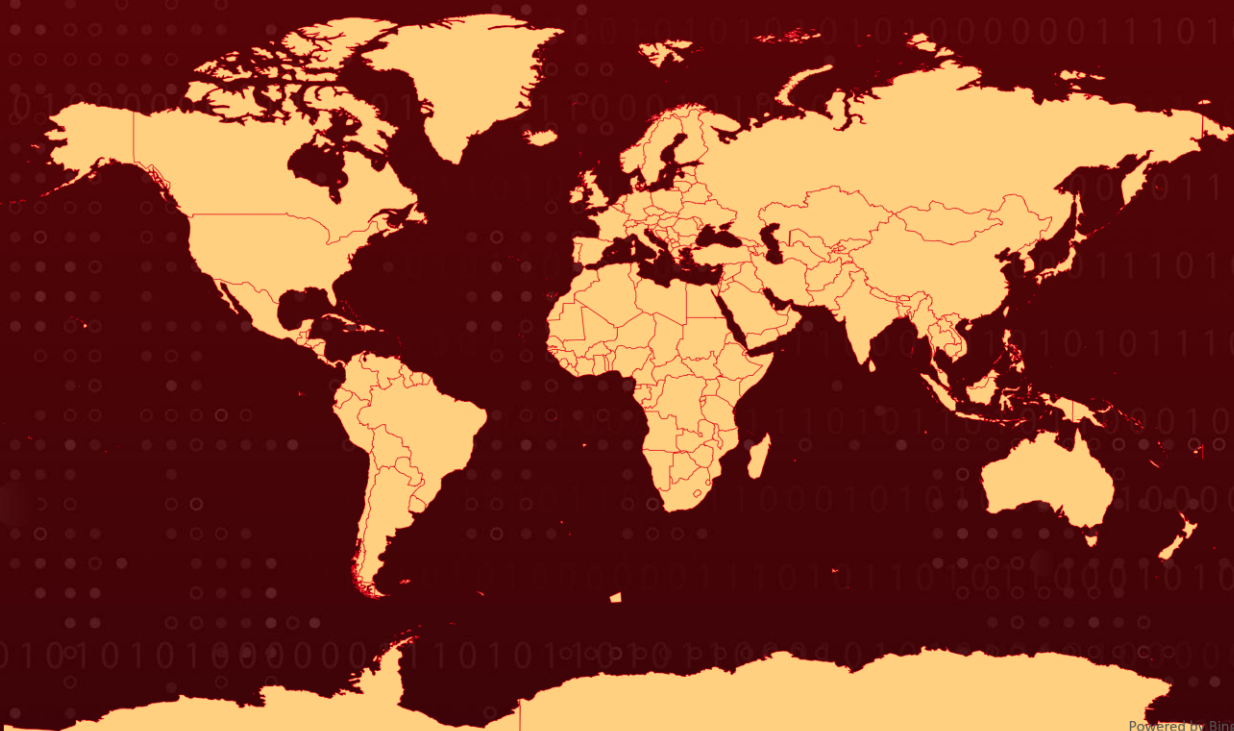

First appeared: November 2022

Attack Region: Worldwide

Impacted platforms: Linux

Attack: Botnet scans and compromises websites that are using WordPress and OpenCart

Attack Details

#1

A new GoTrim botnet has been scanning and brute-forcing on the four Content Management Systems (WordPress, DataLife Engine, Joomla!, and OpenCart) websites. GoTrim botnet is written in Go Programming language and uses “::trim:” to split data to send and receive from the command and control server.

#2

Upon successfully gaining access, a bot client installs PHP scripts on the compromised system and executes the GoTrim malware. later it expands the botnet. To prevent its detection both the GoTrim brute forcer and the downloaded PHP script was deleted from the affected system and it won't maintain persistence in the compromised system.

Recommendations

Security Leaders

Phishing simulations and routine education and awareness training and communications rarely account for MFA fatigue and web browser hygiene. Integrate and communicate all lessons learned.

Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize and block all indicators attributed to the threat actors and attacks through your Command Center. Test your controls with Uni5's Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the 'Potential MITRE ATT&CK TTPs' & 'Indicators of Compromise (IoC)' on the following pages.

Potential **MITRE ATT&CK** TTPs

<u>TA0042</u> Resource Development	<u>TA0001</u> Initial Access	<u>TA0002</u> Execution	<u>TA0006</u> Credential Access
<u>TA0005</u> Defense Evasion	<u>TA0004</u> Privilege Escalation	<u>TA0011</u> Command and Control	<u>TA0009</u> Collection
<u>TA0040</u> Impact	<u>T1584.005</u> Botnet	<u>T1113</u> Screen Capture	<u>T1027</u> Obfuscated Files or Information
<u>T1068</u> Exploitation for Privilege Escalation	<u>T1059</u> Command and Scripting Interpreter	<u>T1560</u> Archive Collected Data	<u>T1134</u> Access Token Manipulation
<u>T1102</u> Web Service	<u>T1110</u> Brute Force
