

THREAT ADVISORY

ATTACK REPORT

Multiple Ransomware groups targets open RDP Ports

Date of Publication

December 5, 2022

Admiralty Code

A1

TA Number

TA2022280

Summary

Active Since: June 2022

Ransomware: BlackHunt, NYX, Redeemer, Vohuk, and Amelia

Attack Countries: United States, South Korea, Netherlands, India, and Vietnam

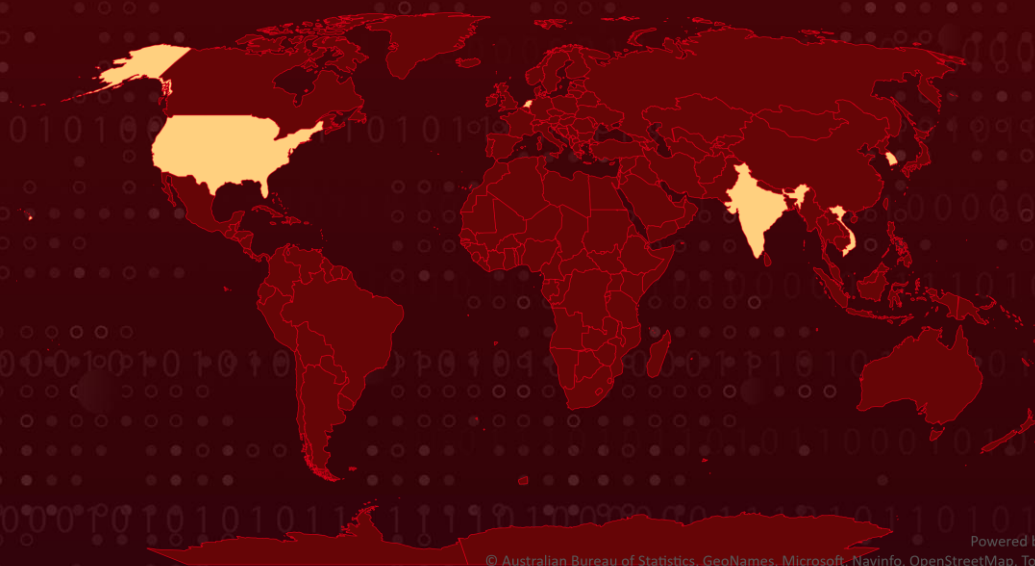

Attack Industries: Government, Law Enforcement Agencies, Manufacturing, Telecommunications, Banking, Financial Services, and Insurance

Attack: Threat actors deploy ransomware after exploiting open RDP ports

CVE

CVE	NAME	PATCH
CVE-2019-0708	Remote Desktop Services Remote Code Execution Vulnerability	

Attack Regions

Attack Details

#1

Many ransomware attacks are being launched against exposed Remote Desktop services by Threat Actors. At present, five ransomware families are attacking open RDP ports.

#2

Redeemer: A C/C++ binary that targets Windows. The executable encrypts the victim's system and drops a ransom note named "Read Me.TXT".

#3

NYX: A C/C++ ransomware developed in 2022. This ransomware may be based on Conti malware. Ransom notes are dropped as .text and .hta files named "000_NYX_READ_ME". In addition, the group claims to exfiltrate the victim's data before encryption and may use a Double Extortion scheme.

#4

Vohuk And Amelia: This ransomware surfaced in the second half of November 2022. It was observed that the ransom notes of these two ransomware groups were similar.

#5

BlackHunt: A new ransomware that targets RDP ports. A ransom note titled "ReadMe" provides instructions for decrypting the files.

Recommendations

Security Leaders

Phishing simulations and routine education and awareness training and communications rarely account for MFA fatigue and web browser hygiene. Integrate and communicate all lessons learned.

Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize and block all indicators attributed to the threat actors and attacks through your Command Center. Test your controls with Uni5's Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the 'Potential MITRE ATT&CK TTPs' & 'Indicators of Compromise (IoC)' on the following pages.

Potential **MITRE ATT&CK** TTPs

<u>TA0001</u> Initial Access	<u>TA0002</u> Execution	<u>TA0003</u> Persistence	<u>TA0005</u> Defense Evasion
<u>TA0006</u> Credential Access	<u>TA0007</u> Discovery	<u>TA0008</u> Lateral Movement	<u>TA0040</u> Impact
<u>T1190</u> Exploit Public-Facing Application	<u>T1082</u> System Information Discovery	<u>T1204</u> User Execution	<u>T1012</u> Query Registry
<u>T1083</u> File and Directory Discovery	<u>T1027</u> Obfuscated Files or Information	<u>T1070</u> Indicator Removal	<u>T1486</u> Data Encrypted for Impact
<u>T1489</u> Service Stop	<u>T1490</u> Inhibit System Recovery	<u>T1547</u> Boot or Logon Autostart Execution	<u>T1021</u> Remote Services
<u>T1110</u> Brute Force			

Indicator of Compromise (IOCs)
