Summary

HiveForce Labs recently made several significant discoveries in the realm of cybersecurity threats. In the past week alone, a total of **seven** attacks were executed, **two** vulnerabilities were uncovered, and **three** active adversaries were identified. These findings underscore the persistent danger of cyberattacks.

Furthermore, HiveForce Labs revealed that there are **two zero-day** vulnerabilities in Ivanti Connect Secure and Ivanti Policy Secure gateways. These vulnerabilities pose a significant risk, as they enable unauthorized remote code execution. The entity identified as UTA0178, a Chinese nation-state-level actor, utilized these exploits to compromise systems.

Silver RAT, developed by the group **Anonymous Arabic**, showcases advanced features such as antivirus evasion and ransomware encryption. **Sea Turtle**, a Turkish APT, specializes in information theft and DNS hijacking, using a reverse TCP shell called **SnappyTCP** to compromise repositories holding valuable and sensitive data. These attacks are on the rise, posing a significant threat to users worldwide.

Insights

January Shield:

Microsoft's Patch Tuesday for January 2024, addressed a total of 49 vulnerabilities across a spectrum of products.

Cryptic Craftsmanship Unveiled:

Behind the intricate creation of Silver RAT in C# lurk the masterminds known as 'Anonymous Arabic,' skillfully exposing the group's direct association with this formidable Remote Access Trojan.

Mastering Multi-

Extortion:

Medusa unleashes a multi-extortion approach, leveraging its Medusa Blog to disclose victim data.

Mysterious Maritime Menace:

Unveiling Sea Turtle, an Advanced Persistent Threat (APT) actor based in Turkey, notorious for its enigmatic tactics involving information theft and DNS hijacking.

Unveiling the Zero-Day Symphony:

UTA0178, a Chinese nation-state-level entity, is the orchestrator behind the exploitation of zero-day vulnerabilities in Ivanti Connect Secure and Ivanti Policy Secure gateways. This underscores the imperative to promptly apply mitigations, thwarting the potential for compromise.

Lumma's Shape-Shifting Tactics:

Lumma Stealer is adapting to the ever-evolving landscape by exploiting users' interests in cracked software via YouTube.

Recommendations

Security Teams

This digest can be utilized as a drive to force security teams to prioritize the **two exploited vulnerabilities** and block the indicators related to the threat actors **Water Curupira, Anonymous Arabic, Sea Turtle**, and malware **PikaBot, Black Basta, Silver RAT, SnappyTCP, Fbot, Lumma, Medusa**.

Uni5 Users

This is an actionable threat digest for HivePro Uni5 customers and they can get comprehensive insights into their threat exposure and can action it effortlessly over the HivePro Uni5 dashboard by

- Running a Scan to discover the assets impacted by the **two exploited vulnerabilities**.
- Testing the efficacy of their security controls by simulating the attacks related to the threat actor **Water Curupira, Anonymous Arabic, Sea Turtle**, and malware **PikaBot, Black Basta, Silver RAT, SnappyTCP, Fbot, Lumma, Medusa** in Breach and Attack Simulation(BAS).

Appendix

Known Exploited Vulnerabilities (KEV): Software vulnerabilities for which there are public exploits or proof-of-concept (PoC) code available, and for which there is a high risk of potential harm to an organization's systems or data if left unaddressed.

Celebrity Vulnerabilities: Software vulnerabilities that have gained significant attention and have been branded with catchy names and logos due to their profound and multifaceted impact. These vulnerabilities provide malicious actors with opportunities to breach sensitive systems, potentially resulting in unauthorized access and the compromise of critical information.
