

Weekly Threat Digest: 28 February – 6 March 2022

Overview:

The first week of March 2022 witnessed the discovery of 381 vulnerabilities out of which 19 garnered the attention of security researchers worldwide. Among these 19, there were 2 zero-days and 1 other vulnerability about which the National vulnerability Database (NVD) is still awaiting analysis while 18 were not present in the NVD at all. Hive Pro Threat Research Team has curated a list of 19 CVEs that require immediate action.

Last week was all about Russia and Ukraine cyber warfare, there were two malware that targeted Ukraine, namely HermeticWiper and Isaacwiper. These are data wiper malware threats that disable infiltrated systems by erasing or wiping essential data rather than rendering it inaccessible through encryption. Daxin was another sophisticated rootkit backdoor malware that emerged last week. The main target for daxin was the organizations and governments of strategic interest to China. This report lastly talks about the common TTPs which could potentially be exploited by this malware or CVEs.
