THREAT ADVISORY

ATTACK REPORT

MalVirt: .NET Malware Loaders Spread through Malvertising Attacks

Date of Publication

February 3, 2023

Admiralty Code

A1

TA Number

TA2023060

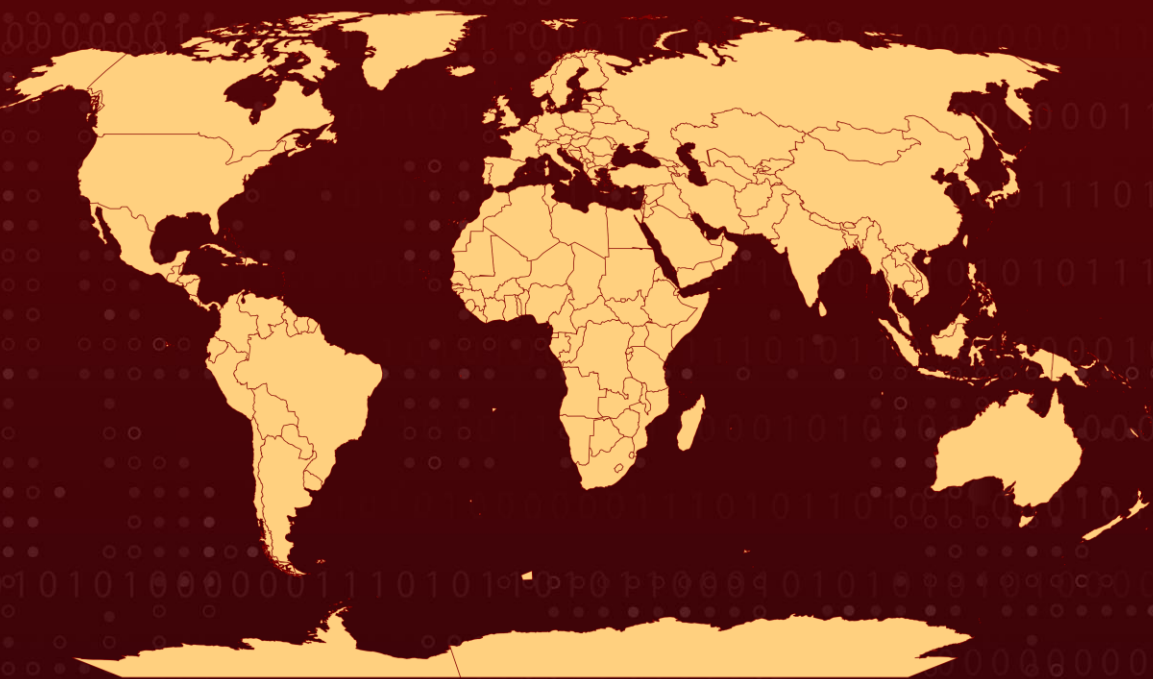

Summary

First appeared: September 2022

Attack Region: Worldwide

Attack: A cluster of virtualized .NET malware loaders, dubbed MalVirt, that are being distributed through malvertising attacks.

Attack Details

#1

MalVirt is a cluster of virtualized .NET malware loaders are distributed through malvertising attacks that use obfuscated virtualization and the Windows Process Explorer driver to evade anti-analysis and terminate processes. The loaders use obfuscated virtualization and the Windows Process Explorer driver to evade anti-analysis and terminate processes.

#2

The malware being distributed is of the Formbook family and is part of an ongoing campaign. The malware beacons to decoy C2 servers hosted on different hosting providers to disguise the real C2 traffic and evade network detections. The spike in alternative malware distribution methods like malvertising is in response to Microsoft blocking Office macros by default.

#3

Formbook is a feature-rich infostealer malware that is sold on the dark web and used for cybercrime and potentially political motivations. The MalVirt loaders use various anti-analysis and anti-detection techniques, including patching the AmsiScanBuffer function and encoding/decrypting strings.

Recommendations

Security Leaders

Phishing simulations and routine education and awareness training and communications rarely account for MFA fatigue and web browser hygiene. Integrate and communicate all lessons learned.

Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize and block all indicators attributed to the threat actors and attacks through your Command Center. Test your controls with Uni5's Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the 'Potential MITRE ATT&CK TTPs' & 'Indicators of Compromise (IoC)' on the following pages.

Potential MITRE ATT&CK TTPs

<u>TA0002</u> Execution	<u>TA0003</u> Persistence	<u>TA0004</u> Privilege Escalation	<u>TA0005</u> Defense Evasion
<u>TA0011</u> Command and Control	<u>TA0001</u> Initial Access	<u>TA0042</u> Resource Development	<u>T1566</u> Phishing
<u>T1027</u> Obfuscated Files or Information	<u>T1090</u> Proxy	<u>T1574</u> Hijack Execution Flow	<u>T1071</u> Application Layer Protocol
