Actor Details

#1

Hydrochasma is a newly identified threat actor that has been targeting shipping companies and medical laboratories in Asia since October 2022. This group's primary focus appears to be on intelligence gathering, and they do not rely on custom malware in their attack campaign, instead using only publicly available and living-off-the-land tools.

#2

The group most likely uses phishing emails to gain access to their victims' machines, using lure documents that mimic a product specification for a freight company and a resume for a development engineer. Once they gain access, Hydrochasma drops various tools, including Fast Reverse Proxy (FRP), Meterpreter, and Cobalt Strike Beacon, that allow for remote access, privilege escalation, lateral movement, and data exfiltration.

#3

Hydrochasma's targets suggest that they may be interested in organizations involved in COVID-19-related treatments or vaccines. The group's lack of custom malware makes it difficult to attribute their attacks, and their use of publicly available tools helps them avoid detection.

	MOTIVE		
	Information theft and espionage		

Recommendations

Security Leaders

Phishing simulations and routine education and awareness training and communications rarely account for MFA fatigue and web browser hygiene. Integrate and communicate all lessons learned.

Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize and block all indicators attributed to the threat actor through your Command Center. Test your controls with Uni5’s Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the ‘Potential MITRE ATT&CK TTPs’ & ‘Indicators of Compromise (IoC)’ on the following pages.

Potential MITRE ATT&CK TTPs

<u>TA0042</u> Resource Development	<u>TA0001</u> Initial Access	<u>TA0002</u> Execution	<u>TA0005</u> Defense Evasion
