THREAT ADVISORY

ATTACK REPORT

**Russia-linked Nodaria group employs
Graphiron information stealer**

Date of Publication

February 13, 2023

Admiralty Code

A1

TA Number

TA2023076

Summary

First appeared: October 2022

Threat Actor: Nodaria (UAC-0056)

Attack Region: Ukraine

Attack: A cyber espionage group linked to Russia, known as Nodaria, has been spotted deploying a newly created information-stealing malware named Graphiron in attacks aimed at Ukraine. The malware, coded in Go, has the ability to gather a significant amount of information from compromised computers, including system details, credentials, and files.

Attack Details

#1

The Nodaria group has been observed as active since March 2021, primarily focusing on targeting entities in Ukraine. In recent attacks, the group employed a new malware called Graphiron, which consists of two components: a downloader and a payload. The downloader has hardcoded command-and-control server addresses. Upon activation, the downloader scans for security software and malware analysis programs and, if none are found, downloads the data-stealing component.

#2

Graphiron uses AES encryption with pre-set keys. It creates temporary files with the extensions ".lock" and ".trash." It also employs hardcoded file names designed to mimic Microsoft Office executables such as "OfficeTemplate.exe" and "MicrosoftOfficeDashboard.exe." Graphiron shares some similarities with previous Nodaria tools like GraphSteel and GrimPlant.

Recommendations

Security Leaders

Phishing simulations and routine education and awareness training and communications rarely account for MFA fatigue and web browser hygiene. Integrate and communicate all lessons learned.

Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize and block all indicators attributed to the threat actors and attacks through your Command Center. Test your controls with Uni5's Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the 'Potential MITRE ATT&CK TTPs' & 'Indicators of Compromise (IoC)' on the following pages.

Potential MITRE ATT&CK TTPs

<u>TA0002</u> Execution	<u>TA0003</u> Persistence	<u>TA0004</u> Privilege Escalation	<u>TA0005</u> Defense Evasion
<u>TA0007</u> Discovery	<u>TA0011</u> Command and Control	<u>T1547</u> Boot or Logon Autostart Execution	<u>T1547.001</u> Registry Run Keys / Startup Folder
<u>T1055</u> Process Injection	<u>T1070</u> Indicator Removal	<u>T1070.004</u> File Deletion	<u>T1016</u> System Network Configuration Discovery
<u>T1018</u> Remote System Discovery	<u>T1057</u> Process Discovery	<u>T1082</u> System Information Discovery	<u>T1071</u> Application Layer Protocol
<u>T1095</u> Non-Application Layer Protocol	<u>T1105</u> Ingress Tool Transfer	<u>T1573</u> Encrypted Channel	<u>T1059</u> Command and Scripting Interpreter

Indicators of Compromise (IOCs)
