Summary

HiveForce Labs recently made several significant discoveries related to cybersecurity threats. Over the past week, they identified a total of **five attacks** that were executed. Additionally, HiveForce Labs identified **four** different **adversaries** that were actively carrying out these attacks.

Interestingly, **six** vulnerabilities were exploited, out of which two were Command Injection Vulnerabilities discovered in Cisco products, while the remaining four were older vulnerabilities.

Apart from these threats, the number of strikes by ransomware groups has increased. Rorschach/BabLock and Money message ransomware were among these ransomware groups. All these attacks were observed to be on the rise, posing a significant threat.

Recommendations

Security Teams

This digest can be utilized as a drive to force security teams to prioritize the **6 exploited vulnerability** and block the indicators related to the threat actor **Winter Viver, APT43**, and malware **Shellbot and Moobot, Rorschach/BabLock and Money Message Ransomware**.

Uni5 Users

This is an actionable threat digest for HivePro Uni5 customers and they can get comprehensive insights into their threat exposure and can action it effortlessly over the HivePro Uni5 dashboard by

- Running a Scan to discover the assets impacted by the **6 exploited vulnerability**.
- Testing the efficacy of their security controls by simulating the attacks related to the threat actor **Winter Viver, APT43**, and malware **Shellbot and Moobot, Rorschach/BabLock and Money Message Ransomware** in Breach and Attack Simulation(BAS).

Appendix

Known Exploited Vulnerabilities (KEV): Software vulnerabilities for which there are public exploits or proof-of-concept (PoC) code available, and for which there is a high risk of potential harm to an organization's systems or data if left unaddressed.

Celebrity Vulnerabilities: Software vulnerabilities that have gained significant attention and been branded with catchy names and logos due to their impact on high-profile individuals and celebrities are also referred to as Celebrity Publicized Software Flaws.
