T1083 File and Directory Discovery	T1614.001 System Location Discovery: System Language Discovery	TA0009 Collection	T1005 Data from Local System
TA0040 Impact	T1486 Data Encrypted for Impact	T1490 Inhibit System Recovery	

Technical Details

#1 Black Basta ransomware group follows the famous double extortion method and has been observed using QBot malware to spread itself. The new Linux variant is been used to target VMware ESXi virtual machines (VMs) that are running on enterprise Linux servers.

#2 The ransomware is pushed via a PowerShell encoded command that is executed by WMI, after compromising the Domain Controller and anti-virus software present on the targeted endpoint.

#3 After the execution, the ransomware adds .basta extension on the encrypted files. The ransomware then uses command-line tool to delete the virtual shadow copies of the system using vssadmin.exe executable file. After gaining the Initial access the ransomware group use PsExec to laterally move around.

Actor Detail

NAME	ORIGIN	MOTIVE	TARGET LOCATIONS	TARGET INDUSTRIES
Black Basta Ransomware Group	N/A	Financial Gain	Australia, Canada, New Zealand, United Kingdom and United States.	Manufacturing , Construction, Transportation , Telcos, Pharmaceuticals, Cosmetics, Plumbing and Heating, Automobile dealers, Undergarments Manufacturers and more.
