**ATTACK
REPORT**

MedusaLocker Ransomware is back targeting organizations in US

Date of Publication

July 1, 2022

Last Updated

A1

TA Number

TA2022139

Summary

Since 2019, a ransomware-as-a-service (RaaS) known as MedusaLocker has been seen targeting organizations mostly in the healthcare sector by exploiting Remote Desktop Protocol (RDP) vulnerabilities.

Potential MITRE ATT&CK TTPs

TA0001 Initial Access	TA0002 Execution	TA0005 Defense Evasion	TA0040 Impact
T1133 External Remote Services	T1566 Phishing	T1059 Command and Scripting Interpreter	T1059.001 Command and Scripting Interpreter: PowerShell
T1562 Impair Defenses	T1562.009 Impair Defenses: Safe Mode Boot	T1490 Inhibit System Recovery	T1486 Data Encrypted for Impact

Technical Details

#1

MedusaLocker ransomware gain access to victim devices through vulnerable Remote Desktop Protocol (RDP) configurations or through email phishing. After which it deploys a PowerShell script to distribute the ransomware throughout the whole network via the Internet Control Message Protocol (ICMP) and Server Message Block (SMB) Protocol.

#2

MedusaLocker ransomware then performs the multiple actions to encrypt data and hide their presence in the network eventually dropping a ransomware note into victim's system.

#3

Organizations can mitigate the risk by following the recommendations:

- Create a recovery plan that keeps several copies of unique or sensitive data and servers in a physically distinct, segregated, and secure location.
- Enable multifactor authentication (MFA) for all users, without exception.
- Implement network segmentation and keep offline backups of data to minimize the organization's downtime.

✂ Indicator of Compromise (IOC)
