DarkTortilla crypter is set to become a formidable threat

Date of Publication

August 25, 2022

Admiralty Code

A1

TA Number

TA2022183

Summary

DarkTortilla is a sophisticated and highly configurable .NET-based crypter that has been active since at least August 2015. The malware is popular for the deployment of remote access trojans (RATs), targeted payloads, and information stealers like RedLine, AgentTesla, NanoCore, Metasploit, Cobalt Strike, and AsyncRat.

Potential MITRE ATT&CK TTPs

TA0002 Execution	TA0005 Defense Evasion	TA0007 Discovery	TA0004 Privilege Escalation
TA0003 Persistence	TA0009 Collection	TA0006 Credential Access	TA0001 Initial Access
T1059 Command and Scripting Interpreter	T1027 Obfuscated Files or Information	T1057 Process Discovery	T1036 Masquerading
T1055 Process Injection	T1547 Boot or Logon Autostart Execution	T1140 Deobfuscate/Decode Files or Information	T1127 Trusted Developer Utilities Proxy Execution
T1115 Clipboard Data	T1574 Hijack Execution Flow	T1070 Indicator Removal on Host	T1056 Input Capture
T1566 Phishing			

Technical Details

#1

DarkTortilla is spread through malicious spam (malspam). An email typically uses a logistics lure and includes a malicious payload in a different language (English, German, Romanian, Spanish, Italian, and Bulgarian) that is customized for the victim.

#2

It consists of two components to deliver payloads: a .NET-based executable (initial loader) and a .NET-based DLL (core processor). The initial loader is responsible to decode, load, and execute the core processor. When executed, the core processor extracts, decrypts, and parses its configuration.

#3

DarkTortilla can evade detection, is highly configurable, and delivers a wide range of popular and effective malware. This threat is a formidable one due to its capabilities and prevalence.
