

THREAT ADVISORY

**ATTACK
REPORT**

LDR4 is a new Ursnif variant

Date of Publication

October 20, 2022

Admiralty Code

A1

TA Number

TA2022230

Summary

In June 2022, a new aspect of the URSNIF malware was identified. Unlike prior URSNIF iterations, this new variation, code named LDR4, is a backdoor designed to facilitate operations such as ransomware and data theft extortion.

Potential MITRE ATT&CK TTPs

TA0002 Execution	TA0001 Initial Access	TA0003 Persistence	TA0004 Privilege Escalation
T1574 Hijack Execution Flow	T1574.002 DLL Side-Loading	T1573 Encrypted Channel	T1573.001 Symmetric Cryptography
T1566 Phishing	T1566.001 Spearphishing Attachment	TA0011 Command and Control	T1059 Command and Scripting Interpreter
TA0042 Resource Development	T1587 Develop Capabilities	T1587.002 Code Signing Certificates	

Technical Details

#1

URSNIF (also known as Gozi or Gozi/ISFB) is one of the oldest banker malware families, with reported attacks dating back to 2007. On the infected computer, the LDR4 variation appears as a DLL module that is executed via the DllRegisterServer function, although there are frequently other arbitrarily named decoy functions exported to mislead sandboxes.

#2

Certain LDR4 binaries contained valid code-signing certificates. The binaries can be 32-bit or 64-bit in architecture and come with a variety of PE crypters. The LDR4 variation included obfuscation for Windows API calls.
