Lazarus neutralizes antivirus software using BYOVD technique

Date of Publication

October 26, 2022

Admiralty code

A1

TA Number

TA2022233

Summary

The Lazarus group exploits known vulnerabilities within Dream Security's MagicLine4NX and INITECH INISAFE CrossWEB EX V3 by utilizing Bring Your Own Vulnerable Driver (BYOVD) technique to neutralize an antivirus program.

Technical Details

#1

Attackers first gain access to a website using the watering hole attack method, which involves taking control of a public website and manipulating its data. When a user vulnerable to INISAFECrossWebEX access the website, it deploys the malware developed by Lazarus and executes the malicious code.

#2

An attacker then uses a vulnerability in MagicLine4NX or RDP or SSH to gain internal access and then uses the Bring Your Own Vulnerable Driver (BYOVD) technique to disable the security products and perform other malicious activities.

Actor Detail

NAME	ORIGIN	TARGET LOCATIONS	TARGET INDUSTRIES
Lazarus Group (Labyrinth Chollima, Group 77, Hastati Group, Whois Hacking Team, NewRomanic Cyber Army Team, Zinc, Hidden Cobra, Appleworm, APT-C-26, ATK 3, SectorA01, ITG03)	North Korea	Australia, Bangladesh, Brazil, Canada, Chile, China, Ecuador, France, Germany, Guatemala, Hong Kong, India, Israel, Japan, Mexico, Philippines, Poland, Russia, South Africa, South Korea, Taiwan, Thailand, UK, USA, Vietnam	Aerospace, Defense, Engineering, Financial, Government, Media, Shipping and Logistics, Technology and Cryptocurrencies
	MOTIVE		
	Information theft and espionage, Sabotage and destruction, Financial crime
