THREAT ADVISORY

ATTACK REPORT

Vice Society gang switches to new custom ransomware

Date of Publication

December 23, 2022

Admiralty Code

A1

TA Number

TA2022315

Summary

First appeared: June 2021

Threat Actors: Vice Society

Attack Region: Antigua and Barbuda, Argentina, Australia, Austria, Brazil, Canada, Colombia, France, Germany, Greece, India, Indonesia, Ireland, Italy, Lebanon, Malaysia, Netherlands, New Zealand, Saudi Arabia, Singapore, Spain, Sweden, Thailand, United Kingdom, United States

Attack Industries: Education, Food Products, Hotels, Financial Services, Professional Services, Insurance, HealthCare, Automotive, Transportation, Media, Pharmaceuticals, Retail, Manufacturing

Attack: The Vice Society ransomware operation has shifted to using a customized ransomware called PolyVice that implements a hybrid encryption strategy.

⚙️ CVEs Table

CVE	NAME	PATCH
CVE-2021-1675	Windows Print Spooler Elevation of Privilege Vulnerability	✓
CVE-2021-34527	Windows Print Spooler Remote Code Execution Vulnerability	✓

🗡️ Attack Regions

Attack Details

#1

Vice Society is a well-established ransomware group that has successfully targeted a range of enterprises. They aim to maximize their financial gain by using the standard double extortion strategy. In recent attacks, the group has employed a new custom-designed ransomware called "PolyVice," which uses a strong encryption technique based on the NTRUEncrypt and ChaCha20-Poly1305 algorithms.

#2

To gain initial access to a network, the gang uses compromised credentials and exploits known vulnerabilities like PrintNightmare. The PolyVice ransomware is a 64-bit Windows binary compiled with MinGW that uses a hybrid encryption approach to securely encrypt files by combining asymmetric and symmetric encryption methods. To speed up the file encryption process, the PolyVice locker uses a multi-threading technique.

#3

PolyVice ransomware has been found to have significant overlap in the encryption method used by the "RedAlert" ransomware and extensive code similarities to Chilly and SunnyDay ransomware. However, the new PolyVice strain offers Vice Society attacks a distinct signature by attaching the ".ViceSociety" extension to encrypted files and dropping ransom notes labeled "AllYFilesAE".

Recommendations

Security Leaders

Phishing simulations and routine education and awareness training and communications rarely account for MFA fatigue and web browser hygiene. Integrate and communicate all lessons learned.

Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize and block all indicators attributed to the threat actors and attacks through your Command Center. Test your controls with Uni5's Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the 'Potential MITRE ATT&CK TTPs' & 'Indicators of Compromise (IoC)' on the following pages.

Potential **MITRE ATT&CK** TTPs

TA0043 Reconnaissance	TA0042 Resource Development	TA0001 Initial Access	TA0002 Execution
TA0005 Defense Evasion	TA0006 Credential Access	TA0007 Discovery	TA0009 Collection
TA0011 Command and Control	T1080 Taint Shared Content	T1553 Subvert Trust Controls	T1036 Masquerading
T1049 System Network Connections Discovery	T1059 Command and Scripting Interpreter	T1531 Account Access Removal	T1486 Data Encrypted for Impact
T1588 Obtain Capabilities	T1190 Exploit Public-Facing Application	T1595 Active Scanning	T1047 Windows Management Instrumentation

Indicator of Compromise (IOCs)
