THREAT ADVISORY

ATTACK REPORT

A New Malware Called Album Stealer is Targeting Facebook Users

Date of Publication

January 24, 2023

Admiralty Code

A1

TA Number

TA2023040

Summary

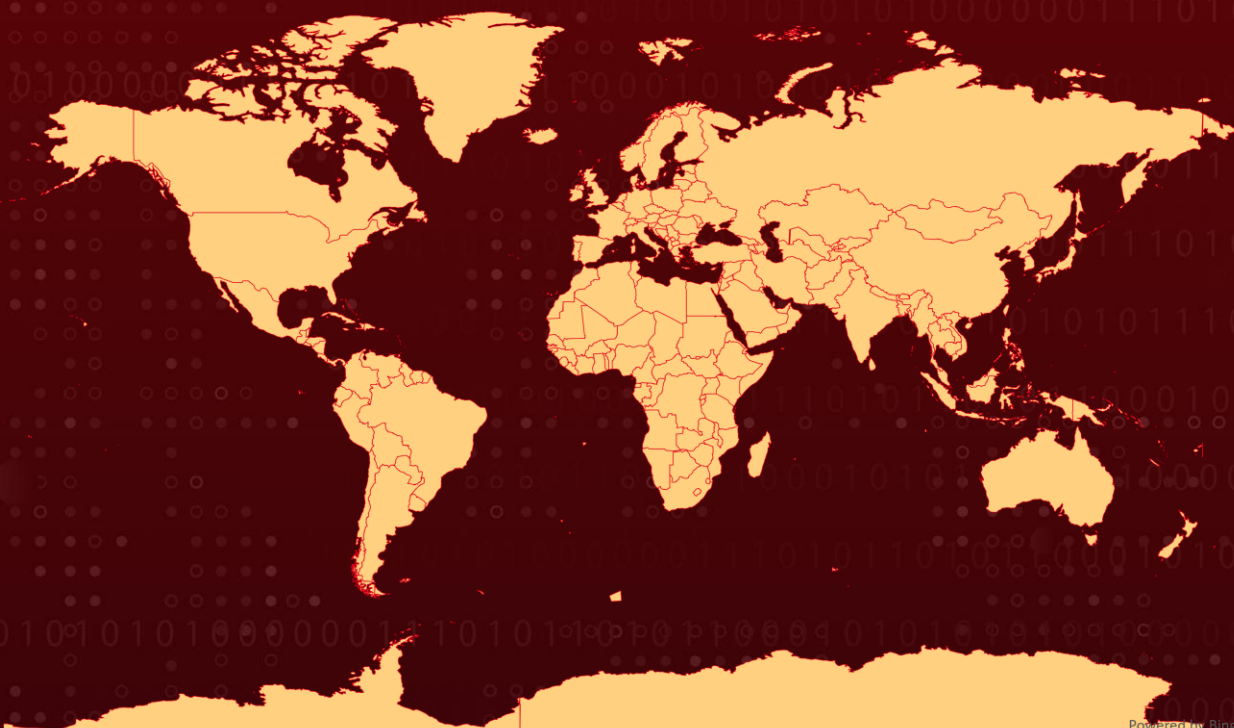

First appeared: January 2023

Attack Region: Worldwide

Affected Platform: Facebook

Attack: Album Stealer is able to bypass security measures by utilizing vulnerable legitimate applications through the technique of DLL side loading.

Attack Details

#1

Album Stealer is a malware that disguises itself as a photo album and drops decoy adult images while performing malicious activity in the background. It uses a side-loading technique to execute malicious DLLs, avoiding detection in multiple stages. The malware steals cookies and stored credentials from different web browsers on a victim's machine and also steals information from Facebook Ads Manager, Facebook Business accounts, and Facebook API graph pages.

#2

The malware employs obfuscation using the ConcurrentDictionary class to mask important strings and data and sends the information collected from an infected system to a command and control server. The malware appears to originate from Vietnam and is delivered via fake Facebook profile pages that contain adult pictures of women that lure victims into clicking on a link to download the album.

Recommendations

Security Leaders

Phishing simulations and routine education and awareness training and communications rarely account for MFA fatigue and web browser hygiene. Integrate and communicate all lessons learned.

Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize and block all indicators attributed to the threat actors and attacks through your Command Center. Test your controls with Uni5's Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the 'Potential MITRE ATT&CK TTPs' & 'Indicators of Compromise (IoC)' on the following pages.

Potential MITRE ATT&CK TTPs
