Vulnerability Details

Apple has released an emergency security update to fix a zero-day vulnerability, CVE-2023-23529, that could be used to hack iPhones, iPads, and Macs. The vulnerability was found in WebKit and could trigger OS crashes, leading to code execution on affected devices. The bug impacts MacOS, Safari 16.3.1 on macOS Big Sur and Monterey. Apple has not disclosed any information about in-the-wild exploitation but has urged users to update their devices as soon as possible. This marks Apple's first patched zero-day this year, with other security issues also addressed in the update.
