THREAT ADVISORY

VULNERABILITY REPORT

Chrome 111 addresses an array of security flaws

Date of Publication

March 13, 2023

Admiralty code

A1

TA Number

TA2023131

Summary

First Seen: March 7, 2023

Affected Product: Google Chrome

Impact: Arbitrary code execution allows attackers to access sensitive information.

⚙ CVEs

CVE	NAME	PATCH
CVE-2023-1213	Use after free in Swiftshader	✓
CVE-2023-1214	Type Confusion in V8	✓
CVE-2023-1215	Type Confusion in CSS	✓
CVE-2023-1216	Use after free in DevTools	✓
CVE-2023-1217	Stack buffer overflow in Crash reporting	✓
CVE-2023-1218	Use after free in WebRTC	✓
CVE-2023-1219	Heap buffer overflow in Metrics	✓
CVE-2023-1220	Heap buffer overflow in UMA	✓
CVE-2023-1221	Insufficient policy enforcement in Extensions API	✓
CVE-2023-1222	Heap buffer overflow in Web Audio API	✓

CVE	NAME	PATCH
CVE-2023-1223	Insufficient policy enforcement in Autofill	✓
CVE-2023-1224	Insufficient policy enforcement in Web Payments API	✓
CVE-2023-1225	Insufficient policy enforcement in Navigation.	✓
CVE-2023-1227	Use after free in Core	✓
CVE-2023-1229	Inappropriate implementation in Permission prompts	✓
CVE-2023-1230	Inappropriate implementation in WebApp Installs	✓
CVE-2023-1231	Inappropriate implementation in Autofill	✓
CVE-2023-1232	Insufficient policy enforcement in Resource Timing	✓
CVE-2023-1234	Inappropriate implementation in Intents	✓
CVE-2023-1235	Type Confusion in DevTools	✓

Vulnerability Details

The stable channel update of Google Chrome, version 111, has addressed several security vulnerabilities. These vulnerabilities include Use After Free in Swiftshader, DevTools, WebRTC, and Core, which allows a remote attacker to deceive a victim into accessing a specially crafted web page, triggering a use-after-free error, and subsequently gaining access to sensitive information. Additionally, the Type Confusion vulnerability in V8, CSS, and DevTools enables attackers to create a custom web page, deceive the victim into visiting it, and execute arbitrary code on the targeted system. Finally, Inappropriate Implementation vulnerabilities have been addressed in Permission Prompts, WebApp Installs, Autofill, and Intents.

Vulnerability

CVE ID	AFFECTED PRODUCTS	AFFECTED CPE	CWE ID
CVE-2023-1213	Google Chrome: 99.0.4844.51 - 110.0.5481.178	cpe:2.3:a:google:google_chrome:~:*:*:*:*:*	CWE-416

Recommendations

Security Leaders

Asset and vulnerability management solutions should be implemented to ensure that all internet-accessible devices are secure, patched, updated, hardened, and monitored. Integrate and communicate all lessons learned.

Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize the vulnerability, identify the impacted assets, and patch them through your Command Center. Test your controls with Uni5's Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the 'Patch Details' on the following page.

Patch Details

Update Google Chrome to version 111.0.5563.64 for Mac/Linux and 111.0.5563.64/.65 for Windows.
