THREAT ADVISORY

ATTACK REPORT

ImBetter Stealer Malware Targets Cryptocurrency Wallets

Date of Publication

March 7, 2023

Admiralty Code

A1

TA Number

TA2023122

Summary

First appeared: March 2023

Malware: ImBetter Stealer

Attack Region: Worldwide (excluding Russia, Kazakhstan, Belarus, and Yakut)

Attack Sector: Cryptocurrency

Attack: The ImBetter Stealer malware has been discovered to be capable of stealing sensitive data and cryptocurrency wallets from its victims through phishing websites. These fake sites imitate popular crypto-wallets and online file converters, tricking users into downloading the malware and putting their confidential information at risk.

Attack Details

#1

ImBetter Stealer malware targets Windows users through phishing websites that mimic popular crypto-wallets and online file converters. These sites are designed to trick users into downloading the malware, putting their confidential data at risk. The malware can steal sensitive browser data, including saved credentials, cookies, user profiles, and cryptocurrency wallets. The ImBetter Stealer malware binary is a 32-bit GUI-based executable.

#2

Once executed, the ImBetter Stealer malware checks the infected system's Language Code Identifier code to determine its language and region. The malware will terminate if the system belongs to one of the following regions - Russia, Kazakhstan, Belarus, or Yakut. Otherwise, the malware captures and stores a screenshot of the infected system.

#3

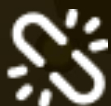

Following the capture of the screen, the stealer establishes a socket connection to the command and control (C&C) IP. The stealer targets wallet extensions in the browser by iterating through hardcoded wallet addresses and storing them in memory as a key-value pair string. This string is then encoded in Base64 format and delivered to the C&C server via the socket established earlier. The stealer closes the socket connection and ends its process after obtaining the wallet data.

Recommendations

Security Leaders

Phishing simulations and routine education and awareness training and communications rarely account for MFA fatigue and web browser hygiene. Integrate and communicate all lessons learned.

Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize and block all indicators attributed to the threat actors and attacks through your Command Center. Test your controls with Uni5's Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the 'Potential MITRE ATT&CK TTPs' & 'Indicators of Compromise (IoC)' on the following pages.

Potential MITRE ATT&CK TTPs
