THREAT ADVISORY

ATTACK REPORT

New BlackSnake Ransomware Performs Clipper Operations on Cryptocurrency Users

Date of Publication

March 10, 2023

Admiralty Code

A1

TA Number

TA2023127

Summary

First appeared: August 2022

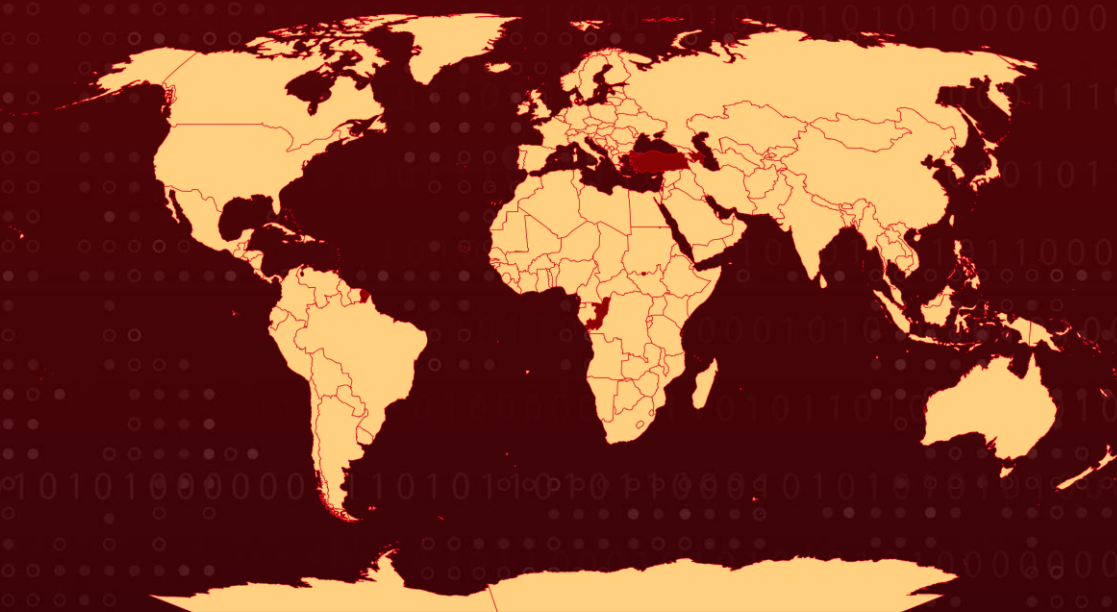

Attack Region: Worldwide (Excluding Azerbaijan and Turkey)

Affected Industry: Cryptocurrency

Malware: BlackSnake, Chaos

Attack: BlackSnake ransomware has been discovered with clipper functionality that intercepts and replaces the cryptocurrency wallet addresses of victims with those of attackers.

Attack Details

#1

The BlackSnake ransomware is a recently developed .NET variant that utilizes the Chaos malware's source code and integrates clipper functionality. This allows the malware to intercept and replace cryptocurrency wallet addresses in a victim's clipboard with those belonging to the attackers. The ransomware also encrypts the victim's files, demands a ransom, and exfiltrates sensitive data to be used in double extortion attacks.

#2

The malware appears to exclude systems located in Azerbaijan and Turkey, while the clipper module targets Bitcoin wallet addresses using a hardcoded regular expression pattern. The ransomware creates a registry entry to identify if it has already infected a system and avoids infecting a system more than once. It also enumerates the names of all currently running processes to prevent multiple instances of malware from running concurrently.

#3

The malware is designed to avoid infecting a system more than once and attempts to limit its impact by excluding certain directories from its encryption process. The TAs behind BlackSnake ransomware were actively seeking affiliates, claiming they would take a 15% share of the profits generated through the affiliation process.

Recommendations

Security Leaders

Phishing simulations and routine education and awareness training and communications rarely account for MFA fatigue and web browser hygiene. Integrate and communicate all lessons learned.

Security Engineers

- **Uni5 Users:** This is an actionable threat advisory in HivePro Uni5. Prioritize and block all indicators attributed to the threat actors and attacks through your Command Center. Test your controls with Uni5's Breach & Attack Simulation.
- **All Engineers:** Refer to and action upon the 'Potential MITRE ATT&CK TTPs' & 'Indicators of Compromise (IoC)' on the following pages.

Potential **MITRE ATT&CK** TTPs

<u>TA0002</u> Execution	<u>TA0003</u> Persistence	<u>TA0004</u> Privilege Escalation	<u>TA0005</u> Defense Evasion
<u>TA0040</u> Impact	<u>TA0007</u> Discovery	<u>TA0009</u> Collection	<u>TA0011</u> Command and Control
<u>T1027</u> Obfuscated Files or Information	<u>T1115</u> Clipboard Data	<u>T1059</u> Command and Scripting Interpreter	<u>T1080</u> Taint Shared Content
<u>T1134</u> Access Token Manipulation	<u>T1057</u> Process Discovery	<u>T1547</u> Boot or Logon Autostart Execution	<u>T1566</u> Phishing
<u>T1082</u> System Information Discovery	<u>T1083</u> File and Directory Discovery	<u>T1204</u> User Execution	<u>T1560</u> Archive Collected Data
<u>T1486</u> Data Encrypted for Impact	<u>T1490</u> Inhibit System Recovery	<u>T1140</u> Deobfuscate/Decode Files or Information	

Indicators of Compromise (IOCs)

TYPE	VALUE
