RedLine InfoStealer exploits Google Chrome's zero-day

Date of Publication

28 March 2022

Last Updated

20 May 2022

TA Number

TA2022078

Summary

The notorious information gathering malware RedLine InfoStealer is stealing data from individuals and organizations such as Samsung, Zoom, Cisco, Vodafone, Jio, Axis Bank by exploiting a two-month-old zero-day vulnerability that affects all chromium-based browsers.

CVE

CVE	NAME	PATCH
CVE-2022-1096	Type Confusion in V8

Technical Details

#1

On 28th March, **Google** released a version 99.0.4844.84 to fix a vulnerability (**CVE-2022-1096**) that was **exploited-in-the-wild**.

#2

This vulnerability affects the **V8** component, which is used to parse **JavaScript** code in Google Chrome. The **type confusion in V8** leads to **logical** flaws in the browser's memory. Successful **exploitation** of the vulnerability could allow an **attacker** to gain **unauthorized** access and higher **privileges** leading to Remote code execution(**RCE**).

#3

RedLine InfoStealer, a highly active malware family that has been stealing personally identifiable information (**PII**) such as **saved passwords** and other **sensitive information** in browsers since 2020, is now exploiting this chromium-based vulnerability.

#4

Over **500k** records are for sale on the **dark web** marketplace, which was **breached** by **RedLine** by exploiting this **vulnerability**. Some of the affected domains include Samsung, Zoom, Cisco, Vodafone, Jio, Axis Bank.
