

Vulnerabilities & Threats that Matter
20 June - 26 June 2022

Summary

The last week of June 2022 witnessed the discovery of 413 vulnerabilities out of which 14 gained the attention of Threat Actors and security researchers worldwide. Among these 14, there were 9 vulnerabilities that were not available on NVD and one of them remained unassigned till date. Hive Pro Threat Research Team has curated a list of 14 CVEs that require immediate action.

Further, we also observed 4 Threat Actor groups being highly active in the last week. All these threat groups are popular for information theft and espionage. One of them originated from Russia (APT28), two of them were from China (ToddyCat and DriftingCloud) and one was from Iran (LYCEUM). Common TTPs which could potentially be exploited by these threat actors or CVEs can be found in the detailed section.
