

THREAT ADVISORY

**VULNERABILITY
REPORT**

Microsoft releases updates for exploited zero-day and other vulnerabilities resulting in RCE.

Date of Publication

July 13, 2022

Admiralty Code

A1

TA Number

TA2022145

Summary

Microsoft patch Tuesday addressed security updates for a Zero-day vulnerability that affects the entire operating system. The update includes bug fixes for Azure Site Recovery, Microsoft Edge (Chromium-based), Microsoft Office, Windows Print Spooler, Components, and many other products and services.

☼ CVE Table

CVE	NAME	PATCH
CVE-2022-22047	Windows CSRSS Elevation of Privilege Vulnerability	✓
CVE-2022-22026	Windows CSRSS Elevation of Privilege Vulnerability	✓
CVE-2022-22049	Windows CSRSS Elevation of Privilege Vulnerability	✓
CVE-2022-30216	Windows Server Service Tampering Vulnerability	✓
CVE-2022-22038	Remote Procedure Call Runtime Remote Code Execution Vulnerability	✓
CVE-2022-30221	Windows Graphics Component Remote Code Execution Vulnerability	✓
CVE-2022-30222	Windows Shell Remote Code Execution Vulnerability	✓

CVE	NAME	PATCH
CVE-2022-22022	Windows Print Spooler Elevation of Privilege Vulnerability	
CVE-2022-22041	Windows Print Spooler Elevation of Privilege Vulnerability	
CVE-2022-30206	Windows Print Spooler Elevation of Privilege Vulnerability	
CVE-2022-30226	Windows Print Spooler Elevation of Privilege Vulnerability	
CVE-2022-22029	Windows Network File System Remote Code Execution Vulnerability	
CVE-2022-33678	Azure Site Recovery Remote Code Execution Vulnerability	
CVE-2022-33676	Azure Site Recovery Remote Code Execution Vulnerability	
CVE-2022-33677	Azure Site Recovery Elevation of Privilege Vulnerability	

Potential MITRE ATT&CK TTPs

T1574 Hijack Execution Flow	TA0005 Defense Evasion	TA0002 Execution	T1059.003 Command and Scripting Interpreter: Windows Command Shell
T1059 Command and Scripting Interpreter	TA0004 Privilege Escalation		

Technical Details

#1

The fixed zero-day vulnerability is an elevation-of-privilege vulnerability that affects Windows Client Server Runtime Subsystem (CSRSS), an important function that malware frequently clones. An attacker who already has a foothold in the system can exploit this vulnerability to gain SYSTEM-level privileges.

#2

The security update also addresses 32 CVEs linked to Azure Site Recovery, two of which were exploited through Remote code execution and the remaining 30 through Elevation of Privilege Vulnerability. Another flaw in Windows Server Service Tampering that allows an authenticated attacker to upload a certificate to the Server service remotely. This vulnerability is more likely to be exploited because it requires no user interaction and only low-level privileges.

#3

Finally, Microsoft's update fixes a number of remote code execution issues in Windows Network File System, Windows Graphics, Remote Procedure Call Runtime, and Windows Shell, as well as four privilege escalation vulnerabilities in the Windows Print Spooler module. This advisory discusses 12 CVEs.

Vulnerability Details

CVE ID	AFFECTED PRODUCTS	AFFECTED CPE	CWE ID
CVE-2022-22047	Windows: 8.1 - 11 21H2 Windows Server: 2008 – 2022	cpe:2.3:o:microsoft:windows:11:*:*:*:*:*:*	CWE-119
