

Vulnerabilities & Threats that Matter

18-24 July 2022

Summary

The third week of July 2022 witnessed the discovery of 497 vulnerabilities out of which 11 gained the attention of Threat Actors and security researchers worldwide. Among these 11, there was 1 vulnerability that is awaiting analysis on the National Vulnerability Database (NVD). Hive Pro Threat Research Team has curated a list of 11 CVEs that require immediate action.

Further, we also observed 2 Threat Actor groups being highly active in the last week. HolyGh0st alias DEV-0530, a North Korean threat actor group popular for financial crime and gain, was observed targeting organizations all around the world using ransomware payload, and 8220 Gang, an unknown threat actor group popular for financial crime and gain was seen expanding their cloud botnets, targeting cloud service users worldwide. Common TTPs which could potentially be exploited by these threat actors or CVEs can be found in the detailed section.
