

THREAT ADVISORY

**ACTOR
REPORT**

**Iranian-linked hacker group victimized Israel's
shipping industry**

Date of Publication

August 19, 2022

Admiralty code

A2

TA Number

TA2022177

Summary

Iranian threat group (UNC3890) used social engineering lures and a watering hole to jeopardize Israel's shipping, government, energy, aviation, and healthcare sectors. This campaign has been running since at least late 2020 and is still going strong as of mid-2022.

Technical Details

#1

UNC3890 acquired preliminary access through watering holes and credential harvesting. The Threat actor group operates an interconnected network of command-and-control (C2) servers, impersonates legitimate services like Office 365 and social networks like LinkedIn and Facebook, and employs phishing baits like fake job offers and commercials for AI-based robotic dolls.

#2

After gaining initial access, attackers utilize a toolset to access and control the victim’s system. Sugardump, a password extraction tool for Chromium-based browsers is one of two distinct tools employed by the threat group.

#3

The second tool is Sugarush, a backdoor that is used to connect to an implanted C2 and execute CMD instructions. It generates a new service named "Service1." SUGARUSH then generates a logging folder called "Logs" and stores it in its current execution directory.

#4

The second version of Sugardump employs SMTP for C2 connection, has more complex credential stealing capabilities, and can extract from Firefox, Chrome, Opera, and Edge browsers before exfiltration.
