

Vulnerabilities & Threats that Matter

September 2022

Top 5 Takeaways

#1

In September, three vulnerabilities remained **unpatched**. Two of them were **Microsoft's ProxyNotShell**(CVE-2022-41040, CVE-2022-41082) and the third one(CVE-2022-3180) affected the **WordPress** plugin

#2

The **Albanian** Government was highly targeted by multiple **Iranian** attackers.

#3

After 10 months of being patched, **Log4j**(CVE-2021-44228) was still seen exploited by **Monti Ransomware**

#4

Lazarus was seen deploying a new tool **MagicRAT**.

#5

Kinsing malware was seen exploiting **two-year-old** vulnerabilities(CVE-2020-14882, CVE-2020-14883) in **Oracle**.

Malware of the Month

NAME	OVERVIEW	TYPE	DELIVERY METHOD
<u>Moisha</u> 	Moisha ransomware is based on .Net and was developed to carry out very targeted attacks, as indicated by its ransom note. The threat actor uses double-extortion techniques to encrypt and exfiltrate victim data.	Ransomware	phishing or using social engineering methods
<u>RedAlert</u> 	RedAlert ransomware aka N13V attack disrupted the operations and online services of a government agency in Chile. In a classic double-extortion manner, the malware targeted the agency to encrypt the documents	Ransomware	Vulnerable Microsoft and VMware ESXi servers
<u>CodeRAT</u> 	CodeRAT allows attackers to monitor the victim's activity and has broad monitoring capabilities that support approximately 50 commands. These capabilities are aimed at webmail, databases, Microsoft Office documents, social media platforms, and Windows.	Remote Access Trojan	Word document with Microsoft Dynamic Data Exchange (DDE) exploit
<u>MagicRAT</u> 	MagicRAT creates scheduled tasks on compromised systems to achieve persistence. Additionally, it gives the attacker a remote shell to execute arbitrary commands and manipulate files.	Remote Access Trojan	Vulnerable VMware Horizon servers
<u>Monti</u> 	The ransomware payload dropped after the initial infection is a 32-bit Windows executable named "locker.exe." Upon execution, the ransomware encrypts files on a disc, adds a ".PUUUK" extension to encrypted file names, and produces the ransom note.	Ransomware	VMware Horizon Vulnerable to Log4Shell (CVE-2021-44228)

NAME	OVERVIEW	TYPE	DELIVERY METHOD
SideWalk 	SideWalk is a multifunctional backdoor that can load other modules from the command-and-control server. It employs Google Docs as a dead-drop resolver and Cloudflare workers as its command and control (C2) server. The malware runs five threads simultaneously in order to complete a single task.	Backdoor	Unkown
Kinsing 	Kinsing malware which is responsible for cryptomining and sending data to the attacker's C2 channel.	Malware	Oracle WebLogic Server vulnerable to CVE-2020-14882, CVE-2020-14883
