The surge of cryptojacking campaigns

Date of Publication

October 11, 2022

Admiralty Code

A1

TA Number

TA2022218

Summary

Recent cryptojacking campaigns disclosed that intruders exploited DLL Side-Loading issues in Microsoft OneDrive by writing a fake secur32.dll file to establish persistence and operate undetected on compromised systems.

Potential MITRE ATT&CK TTPs

TA0002 Execution	T1204 User Execution	T1204.002 Malicious File	T1106 Native API
TA0003 Persistence	T1547 Boot or Logon Autostart Execution	T1547.001 Registry Run Keys / Startup Folder	TA0005 Defense Evasion
T1574 Hijack Execution Flow	T1574.002 DLL Side-Loading	T1055 Process Injection	T1055.012 Process Hollowing
TA0007 Discovery	T1057 Process Discovery	T1082 System Information Discovery	T1614 System Location Discovery
TA0011 Command and Control	T1071 Application Layer Protocol	T1071.001 Web Protocols	TA0040 Impact
T1496 Resource Hijacking			

Technical Details

#1

During the initial access, the malicious secur32.dll appears to be delivered to its destination, masquerading as genuine software. Dropping the secur32.dll divulged either of the two patterns. First, a small dropper malware process is employed to write the malicious secur32.dll and additional components to the disk. In the second scenario, the dropper malware injects malicious code into AppLaunch.exe.

#2

This malicious dynamic link library is then loaded by the two OneDrive processes OneDrive.exe and OneDriveStandaloneUpdater.exe. The dropper malware attempts to reduce noise by first determining whether the infected device is capable of crypto-currency mining before communicating with C2 servers via a Telegram channel. If the dropper cannot locate XMRig or lolMiner on the disk, it signifies that secur32.dll has not yet been executed.
