

THREAT ADVISORY

**ATTACK
REPORT**

Threat actors buy new BlueFox Stealer to
exfiltrate data

Date of Publication

November 3, 2022

Admiralty Code

A1

TA Number

TA2022244

Summary

A Russian-speaking user named distamx has been selling BlueFox Stealer as malware-as-a-service since December 2021. A subscription to the customizable malware costs \$350 per month on underground forums. BlueFox Stealer attacks are likely to increase because distamx has closed the sales due to an overwhelming response from threat actors.

Technical Details

#1 A typical information stealer, BlueFox Stealer is focused on cryptocurrency wallets, as well as file grabbers and loaders.

#2 Some of the Bluefox capabilities include:

- Stealing passwords and cookies from well-known browsers (Chrome, Edge, Opera, Mozilla).
- Targets almost all desktop cryptocurrency wallets and password extensions.
- Taking Screenshots.
- File Grabbing, downloading, and loading.
- Take fingerprints of a system.

#3 As soon as the data is collected, it is exfiltrated to BlueFox's C2 server using socket communication via TCP/IP, using the native protocol. Windows commands are then used to remove the malware from an infected host.
